

SPACE EXPLORATION SUMMARY 2024

The James Webb Space Telescope was launched in December 2021.

It orbits the Sun at a distance of 1.5 million kilometers from Earth.

Webb can see further back in time than any previous telescope, to about 200 million years after the Big Bang.

The International Space Station has been continuously occupied since November 2000.

It travels at a speed of 28000 kilometers per hour.

SpaceX's Starship is the most powerful rocket ever built.

It stands 120 meters tall and can carry 100 tons to orbit.

The Artemis program aims to return humans to the Moon by 2025.

Mars colonization remains a long-term goal for multiple space agencies.

The Voyager 1 probe, launched in 1977, is now over 24 billion kilometers from Earth.
