

MARINE BIOLOGY RESEARCH NOTES

The ocean covers 71 percent of Earth's surface.

The Mariana Trench is the deepest point in the ocean at 11034 meters.

Coral reefs are home to 25 percent of all marine species.

The Great Barrier Reef in Australia is the largest coral reef system in the world.

It stretches over 2300 kilometers and can be seen from space.

Plastic pollution is a major threat to marine life.

Over 8 million tons of plastic enter the ocean each year.

Sea turtles can live up to 80 years and some species migrate over 10000 kilometers.

Global warming is causing ocean temperatures to rise.

The ocean absorbs about 30 percent of the carbon dioxide produced by humans.
