

MEDICAL DISCOVERIES AND FACTS

Penicillin was discovered by Alexander Fleming in 1928.

It was the first antibiotic and revolutionized medical treatment.

The human heart beats about 100000 times per day.

It pumps approximately 7500 liters of blood daily through the body.

Vaccines have saved more lives than any other medical intervention.

The smallpox vaccine eradicated the disease globally by 1980.

DNA was first identified by Friedrich Miescher in 1869.

The Human Genome Project was completed in 2003 and mapped all human genes.

There are approximately 20000 protein-coding genes in the human genome.

Regular exercise can reduce the risk of chronic diseases by up to 50 percent.
